Engelbart import: dedupe and grouping (v2)

Engelbart -- Import redesign: dedupe and grouping -- v2, October 13, 2026 -- David (with Hudson)

Why

Both pilots hit duplicate problems. Priya (Oct 9): the same paper appeared twice, once from Zotero and once from Downloads, and the import missed about 140 of her Claude chats. Daniel (Oct 13): wanted Notion and Granola import and could not tell what the "Other" tile on the connect screen meant.

Three kinds of "same"

ind	Example	Policy
xact copy	same PDF bytes in Zotero storage and ~/Downloads	merge silently; keep every location as provenanc
ame work, different version	arXiv v1 and the camera-ready of one paper	group under one paper; show versions
wn drafts	report.pdf vs report_draft.pdf, Overleaf "Copy of" projects	version stack; never merge

Signals

• Exact: content hash (sha256).

• Same work: DOI or arXiv id when present; otherwise normalized title + first author + year.

• Drafts: same title stem with v2 / draft / "Copy of" / "(1)" markers, or same Overleaf project lineage; compare section headings.

False merges to avoid

Content similarity alone merged draft versions about 61% of the time in a published study of personal imports. Our own test on my accounts: shingling at Jaccard 0.8 merged the TutorTrace rebuttal with its copy, which I do not want merged.

Connect screen

Rename "Other" to "Files & folders" and list what it covers. Add Notion and Granola tiles behind a "coming soon" state.

Missed chats

Claude export pagination: the import stopped at the first page of conversations in a project. Fix in importer, add a count check ("we found 312 chats; your export lists 452").

Next

Ship exact-merge + same-work grouping for pilot C; version stacks after.
