VizPI deployment #2 - CS 3114 lab - TA run sheet

VizPI deployment #2 -- CS 3114, Wednesday November 12, 2025 -- lab session 3:30 pm ET

Host: John Wenskovitch. Research team: David, Minsun, Xiaohang. TAs: 3 (two sections).

Before the lab (by 3:00 pm)

• Deploy vizpi_frontend build from main; confirm websocket server health check returns ok.

• Open the dashboard on the instructor laptop; check both section rooms appear.

• Print 90 consent sheets (87 enrolled) with the per-stream opt-in boxes.

During the lab

Time	Who	What
3:30	John	introduce the activity; consent reminder
3:35	David	students log in; check event counts per section on dashboard
3:40-4:50	TAs	circulate; note any student who asks for help (seat number + time)
every 10 min	Minsun	screenshot event-rate panel for both sections
4:50	John	wrap up, exit survey link

If events drop

If a section's event rate falls below 50% of the other section for more than 2 minutes, check the reconnect log. Do not restart the server during the lab without telling John. Hotfix procedure: deploy the patched client, ask students to refresh once.

After the lab

Export raw events to the lab bucket; record any gaps with start and end times in the deployment log. Labeling sprint starts Friday (Nov 14) with Minsun and Xiaohang.

Log (filled in after)

Section B lost events from about 3:52 pm (reconnect bug). Hotfix deployed 4:10 pm; students refreshed. About 12% of section B events lost; gap recorded for exclusion.
